HOT STAMPING

Hot stamping guarantees a premium touch to your bottle decoration. Sophisticated hot stamping process can be applied on small or large parts of your product decoration. It can be applied to flat, cylindrical and on conical shaped bottles in combination of up to eight colours. Attractive high-end quality finish will guarantee your product a stylish and premium outlook.

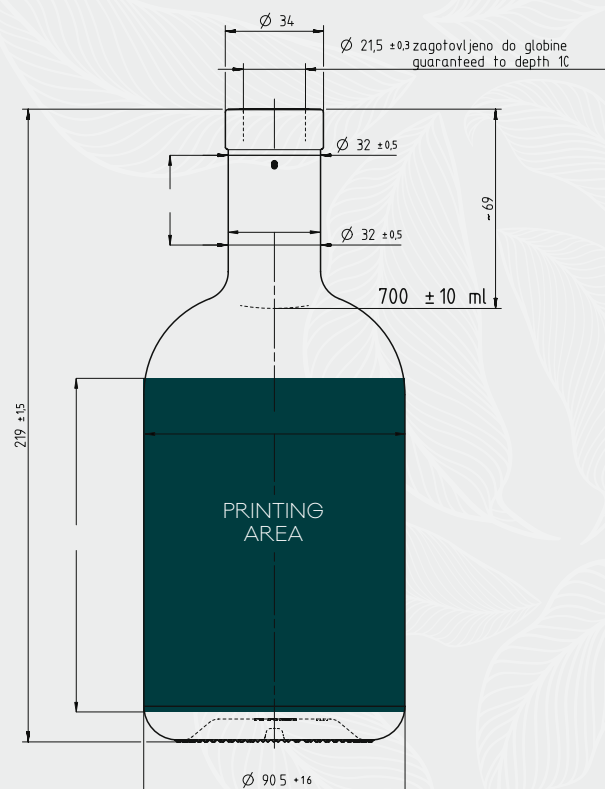

HRASTNIK 1860

UV COLOURS

Powerful and mysterious are the words to define the up trending UV colours. With our fully automated modern machines we can print up to eight UV colours on most bottle shapes. UV colour definitely has its character and sends a strong statement to ensure your bottle will stand out.

PRINTING AREA

The print surface varies depending on the shapes and sizes of the bottle and the technologies used. The fundamental printing areas can be determined based on the height and volume of the item, taking into consideration parameters such as offsets from the bottom, top, edges, openings, etc. It is essential to consider these factors when determining the extent of the surface available for printing and labelling. We offer printing on the flat surface of miniature bottles up to a height of 395 mm.

We can arrange an individual discussion with our experts from the decor department to determine the optimal print and labelling area that your bottle allows.

HRASTNIK1860

SAT IMITATION

Unlike acid etching, sat imitation is an eco friendly decoration method. Because its smoothness and satin-like surface we can get very close to the frosted result. We can print sat imitation on all printing area defined or just partially. Sat imitation will provide the luxurious effect and is ideal for any additional decoration.

HRASTNIK1860

SCREEN PRINTING

The combination of quality and simplicity makes screen printing the most popular method of decoration. Our modern automatic machines enable screen printing in one single process with up to eight colours. Screen printing can also be combined with other decoration methods on most bottle shapes.

HRASTNIK1860

PRECIOUS METALS

Gold is the money of kings and silver is the money of gentlemen. These precious metals will never wear out and have been popular in all ages. Precious metals can be applied directly on transparent glass and will guarantee a spectacular and Super premium feel of the bottle.

HRASTNIK 1860

SPRAYING

Our brand new spraying solution enables us to coat bottles of almost all shapes and sizes with up to two colours at the same time. We can spray the entire bottle, or we can just partially spray the bottle in order to apply additional decoration techniques in the next step.

HRASTNIK1860

TAMPO PRINT

Tampo printing is the best solution for printing on areas where decoration with other methods is not possible. Tampo printing is done with only one colour, which you can choose from all pantone colours, to guarantee your bottle decoration a special touch.

HRASTNIK 1860

DECAL APPLICATION

Decal applications are a possible alternative to screen printing and are applied manually on transparent glass. This process is used for bottles that are of too irregular shape to be automatically screen printed. They are mostly used for small series and limited editions. With decals we have no limitations about colours.

HRASTNIK1860

METALLIZATION

Metallization is a coating process that gives a mirror like, shiny finish to your bottle. Metalization can be done on the entire bottle in silver colour (mirror effect). If we do the combination with spraying, we can achive metalization effect in various colours and shades.
